NATIONAL ASSESSMENT AND
ACCREDITATION COUNCIL

Department of History

Programme outcome

For undergraduate BA programs in history, learning outcomes typically include:

1. ***Historical Knowledge***: Students should develop a comprehensive understanding of key events, figures, and developments in various historical periods and regions.
2. ***Critical Thinking***: Analytical skills are crucial, enabling students to evaluate historical sources, arguments, and interpretations critically.
3. ***Research Skills***: Students should learn how to conduct historical research, including locating and analyzing primary and secondary sources, and synthesizing information to form coherent arguments.
4. ***Communication***: Effective written and verbal communication skills are essential for presenting historical arguments clearly and persuasively.
5. ***Contextualization***: Students should be able to place historical events and phenomena within their broader social, political, economic, and cultural contexts.
6. ***Historiography***: Understanding different historical approaches and interpretations, as well as the evolution of historical thought, is important for developing a nuanced understanding of the discipline.
7. ***Ethical Awareness***: Recognizing the ethical implications of historical study, including issues related to bias, representation, and cultural sensitivity.
8. ***Interdisciplinary Connections***: Appreciating how history intersects with other disciplines, such as sociology, anthropology, political science, and literature, enriches students' understanding of the past.

Programme Specific Outcome

Program-specific outcomes for a history undergraduate BA program might include:

1. ***Historical Periodization***: Students can identify and analyze key historical periods, events, and developments within their specific geographical and chronological contexts.
2. ***Historical Methodologies***: Understanding and applying various historical methodologies, such as social history, cultural history, political history, economic history, and intellectual history, to interpret primary and secondary sources.
3. ***Research Proficiency***: Conducting independent research projects, including formulating research questions, locating and evaluating primary and secondary sources, and synthesizing findings into coherent arguments.
4. ***Historical Writing***: Demonstrating proficiency in writing historical essays, research papers, and other scholarly works, following appropriate citation styles and academic conventions.
5. ***Historical Interpretation***: Developing the ability to critically analyze and interpret historical evidence, perspectives, and narratives, while recognizing biases and considering multiple viewpoints.
6. ***Public History Engagement***: Engaging with public history practices, such as museum studies, archival work, oral history projects, and community outreach initiatives, to communicate historical knowledge to broader audiences.
7. ***Global Perspective***: Exploring global connections and exchanges, including the impact of imperialism, colonialism, globalization, and transnational movements on historical processes and phenomena.
8. ***Critical Engagement***: Engaging in debates and discussions about historical controversies, debates, and interpretations, while respecting diverse viewpoints and contributing to academic discourse.
9. ***Digital Literacy***: Utilizing digital tools and technologies for historical research, data analysis, visualization, and presentation, while understanding the ethical and methodological implications of digital

Department of Botany	
Programme Outcome	1.To transform curriculum into outcome-oriented scenario. 2. To develop the curriculum for fostering discovery-learning. 3. To equip the students in solving the practical problems pertinent to India. 4. To adopt recent pedagogical trends in education including e-learning, flipped class, hybrid learning and MOOCs 5. To mold responsible citizen for nation-building and transforming the country towards the future. 6. To provide an environment that ensures cognitive development of students in a holistic manner. A dialogue about plants and its significance is fostered in this framework, rather than didactic monologues on mere theoretical aspects 7. To provide the latest subject matter, both theoretical as well as practical, such a way to foster their core competency and discovery learning. A botany graduates as envisioned in this framework would be sufficiently competent in the field to undertake further discipline-specific studies, as well as to begin domain-related employment.
Programme Specific Outcome	<ul style="list-style-type: none"> ➤ To mould a responsible citizen who is aware of most basic domain-independent knowledge, including critical thinking and communication. ➤ To enable the graduate prepare for national as well as international competitive examinations, especially UGC-CSIR NET and UPSC Civil Services Examination.
Course Outcomes	
Semester - I (NEP) Botany (Minor) Paper-SC23MiDSC BOT 102 Microbes and Algae	On completion of the course, the students will be able to: ☑ Develop understanding on the concept of microbial nutrition. ☑ Classify viruses based on their characteristics and structures. ☑ Develop critical understanding of plant diseases and their remediation. ☑ Examine the general characteristics of bacteria and their cell reproduction/recombination. ☑ Increase the awareness and appreciation of human friendly viruses, bacteria, algae and their economic importance. ☑ Conduct experiments using skills appropriate to subdivisions.
Botany Practical (Minor) SC23PMiDSC BOT 102	On completion of the course, the students will be able to: The students to learn about the Virus, Bacteria and Algae ☑ Understand the instruments, techniques, lab etiquettes and good lab practices for working in a microbiology laboratory. ☑ Develop skills for identifying microbes and using them for Industrial, Agriculture and Environment purposes. ☑ Practical skills in the field and laboratory experiments in Microbiology & Pathology. ☑ Learn to identify Algae.
Botany (Multi) SC23MDSC BOT 103 Plants in Everyday Life	On completion of the course, the students will be able to: ☑ Can start own enterprise on herbal products. ☑ Recall various economically and medicinally important plant species used in day-to-day life ☑ Explain the use of economically important plants and illustrate the processing of various plant parts. ☑ Analyze and utilization of various plant resources in day-to-day life.

Botany Practical (Multi) SC23PMDSC BOT 103	On completion of the course, the students will be able to: ☑ This course is designed to give an overview of how plants are indispensable to humans. ☑ It gives a broad exposure to the various aspects of plant resource and its utilization.
Botany (SEC) SC23SEC BOT 106 Horticulture	On completion of the course, the students will be able to: ☑ To gain knowledge of gardening, cultivation, multiplication, raising of seedlings of garden plants. ☑ To get knowledge of new and modern techniques of plant propagation. ☑ To develop interest in nature and plant life.
Semester- II Botany (Minor) SC23MidSC BOT 202 Organic Molecules and Cytology	On completion of the course, the students will be able to: ☑ To help the students to gain knowledge on the activities in which the giant molecules and miniscule structures that inhabit the cellular world of life are engaged. ☑ This will provide inside into the organization of cell, its features and regulation at different levels. ☑ Through the study of biomolecules and cell organelles, they will be able to understand the various metabolic processes such as respiration, photosynthesis etc. which are important for life.
Botany (Minor) Practical SC23PMiDSC BOT 202	On completion of the course, the students will be able to: ☑ To help the students to gain knowledge on the activities in which the giant molecules and miniscule structures that inhabit the cellular world of life are engaged. ☑ This will provide inside into the organization of cell, its features and regulation at different levels. ☑ Through the study of biomolecules and cell organelles, they will be able to understand the various metabolic processes such as respiration, photosynthesis etc. which are important for life.
Botany (Multi) SC23MDC BOT 203 Fruits and Vegetable Processing	On completion of the course, the students will be able to: ☑ This course is designed to give an overview of different types of fruits and vegetables, their composition and methods used in processing and preservation.
Botany (Multi) Practical SC23PMDC BOT 203 Fruits and Vegetable Processing	On completion of the course, the students will be able to: ☑ The practical component of this course deals with imparting skills in preparation of various processed products.
Botany (SEC) SC23SEC BOT 206 Natural Resource Management	On completion of the course, the students will be able to: ☑ Understand the importance, benefits and services of biodiversity. ☑ To learn the strategies for the conservation of biodiversity. ☑ This knowledge is critical in evolving strategies for sustainable natural resource management and biodiversity conservation.
Semester- III Botany CC BOT 301 MYCOLOGY AND PHYTOPATHOLOGY	On completion of this course, the students will be able to: ☑ Identify true fungi and demonstrate the principles and application of plant pathology in the control of plant disease. ☑ Demonstrate skills in laboratory, field and glasshouse work related to mycology and plant pathology. ☑ Develop an understanding of microbes, fungi and lichens and appreciate their adaptive strategies. ☑ Identify the common plant diseases according to geographical locations and device control measures.
Botany CC-BOT-302:	On completion of this course, the students will be able to:

ARCHEGONIATE	<ul style="list-style-type: none"> ☑ Demonstrate an understanding of archegoniatae, Bryophytes, Pteridophytes and Gymnosperms. ☑ Develop critical understanding on morphology, anatomy and reproduction of Bryophytes, Pteridophytes and Gymnosperms. ☑ Understanding of plant evolution and their transition to land habitat. ☑ Demonstrate proficiency in the experimental techniques and methods of appropriate analysis of Bryophytes, Pteridophytes, Gymnosperms.
Botany Practical PC BOT 301	To enable to the students to learn about the Mycology and phytopathology
Botany Practical PC BOT 302	To enable the students to learn about the archegoniate, Bryophyte, Pteridophytes and Gymnosperms with suitable example.

Department of Chemistry

Programme Outcome	<p>Students will demonstrate an understanding of major concepts in all disciplines of chemistry.</p> <p>Students will employ critical thinking and the scientific method to design, carry out, record and analyze the results of chemical experiments and get an awareness of the impact of chemistry on the environment, society, and other cultures outside the scientific community.</p>
Programme Specific Outcome	<p>The ability to explain chemical nomenclature, structure, reactivity, and function in their specific field of chemistry. The design and execution of the experiment should demonstrate an understanding of good laboratory and the proper handling of chemical waste streams and also explain how the applications of Chemistry relates to the real world.</p>
Course Outcomes	
Fundamentals of Chemistry-I SC23MJDSCCHE-101	To enable to the students to learn about the chemical bonding in variety of molecules by using various theories, introduction, structure and properties of organic molecules and reaction mechanism, various law of Chemical Kinetics and Analytical Chemistry.
Practical Major Discipline Specific Course: PMJDSC	To enable to the students to learn about the identification of Organic compounds by semi-micro methods, To enable to the students to learn about the standardization of various mixtures, calibration of burette and pipette. Preparation of standard solutions and different volumetric analysis.
General Chemistry-I SC23MDCCHE-103	Introduction of coordination compounds, geometry and their applications in various fields, basic knowledge of stereochemistry of organic compounds, chemical kinetics, nuclear chemistry and principle, mechanism and applications of volumetric analysis.
Practical Multi Discipline Course: PMDC	To enable to the students to learn about the identification of Organic compounds by semi-micro methods, Volumetric titrations of various mixtures, calibration of burette and pipette.
Fundamentals of Chemistry-II SC23MJDSCCHE-201	To enable the students to learn about Crystal field theory, VB and MO theory for Coordination Compounds. To enable the students to learn about the fundamental knowledge of stereochemistry, To enable the students to learn about introduction and different laws of Thermodynamics and skill of Volumetric Analysis.
Practical Multi Discipline Course: PMDC	To enable to the students to learn about the Semi micro qualitative analysis of Inorganic powders, Volumetric titrations of various mixtures, calibration of burette and pipette.
General Chemistry-II SC23MDCCHE-203	To enable the students to learn about introduction and different laws of Thermodynamics and skill of Volumetric Analysis. To enable the students to learn about introduction and different skill of Complexometric Titration.
Practical Multi Discipline Course: PMDC	

Chemistry Paper-CC CH 301	The students to learn basic knowledge of wave mechanics, to understand properties of acid and base, organic compounds by various effects, phase equilibrium and their application and partial molar properties.
Chemistry Paper-CC CH 302	To enable to the students to learn about the chemistry of noble gases, biochemistry of amino acids and peptides, electrophilic aromatic substitution reactions, physical properties of liquids.
Chemistry Practical Paper-LC CH 301	To enable to the students to learn about the instrumental techniques for quantitative analysis and chemical kinetics, semi- micro analysis of water insoluble binary mixture,
Chemistry Paper-CC CH 401	To enable the students to learn about Crystal field theory, magnetic properties of coordination compounds. Heterocyclic compounds for five and six membered carbohydrates as well as different titrations of acids.
Chemistry Paper-CC CH 402	To enable the students to learn about Boron hydrides, basic spectroscopic techniques and its applications in chemical industries. Knowledge of Electrochemistry and different electrode used in the various instrumentation techniques.
Chemistry Paper-SE CH 401A	To enable the students to learn about the mechanism and synthetic application of name reactions e.g. Arndt-Eistert reaction, Hofmann rearrangement, aldol condensation, Diels- alder reaction, Dieckmann condensation, clemmensen reduction, Dakin reaction
Chemistry Paper-SE CH 401B	To enable the students to learn about the basics of green chemistry and designing of green synthesis in chemistry.
Chemistry Practical Paper-LC CH 401	To enable all the students for the basic knowledge of chemical analysis of inorganic compounds, volumetric techniques as well as chromatographic Techniques. chromatography of 1st and 3rd group radicals.
Chemistry Paper-CC CH 501	To enable the students to learn about reaction mechanism of coordination compounds and their applications in industry, Organo Metallic Compounds (OMC) and Corrosion with their types and importance.
Chemistry Paper-CC CH 502	To enable the students to learn about the fundamental knowledge of stereochemistry, carbohydrates, isoprenoids and nucleophilic substitution at saturated carbon atom with understand the importance.
Chemistry Paper-CC CH 503	To enable the students to learn about electromotive force, Statistical Thermodynamics and macromolecules with understand the importance.
Chemistry Paper-CC CH 504	To enable the students to learn about symmetry of molecules and NMR Spectroscopy and Acid base Titration with understand the importance.
Chemistry Paper-SE CH 505 A	To enable the students to learn about the dyes, their classification, Synthesis and uses of Congo Red, Eosin, Alizarin, Crystal violet, Indigo, Sefronine -T, Methylene Blue, Ereochrom Black -T, Rhodamine, Rosanilin
Chemistry Paper-SE CH 505 B	To enable the students to learn about the Oils, Fats and Waxes and their analysis,

Chemistry Paper-SE CH 505 C	To enable the students to learn about the paints, varnishes and their difference.
Chemistry Paper-SE CH 505 D	To enable the students to learn about the cosmetics, their analysis, types and their effect on health.
Chemistry Paper-SE CH 505 E	To enable the students to learn about the production and purification of metals, microbial metallurgy, Extraction, Separation and Purification of Al and Ge from its Ore
Chemistry Practical Paper-LC CH 507	To predict the outcome and mechanism of some organic separations, determination, identifications with preparation of derivatives. Various metals analysis by gravimetric and volumetric by conventional method.
Chemistry Paper-CC CH 601	To equip the knowledge of molecular orbital theory, hybridization, physical and chemical properties of metal carbonyl and essential elements as well as the study of invitro and in vivo in bioorganic chemistry.
Chemistry Paper-CC CH 602	To enable the students, the basic knowledge of Markovnikovs and anti-Markovnikovs and Keto-enol tautomerism and the mechanism of Bimolecular displacement of SN1 and SN2 reactions.
Chemistry Paper-CC CH 603	To enable the students to learn about the First, Second, Third Law of Thermodynamics, Photochemical Reactions and its theoretical aspects.
Chemistry Paper-CC CH 604	To develop the students based on the term symbols and spectra related to the d1-d9 octahedral complex. And learn about the symmetry and Spectroscopy related to the IR, UV, and NMR Spectra and the TLC, HPLC Chromatography techniques and its applications.
Chemistry Paper-SE CH 605 A	Students will understand the concept of Classification and Nomenclature of polymers, Isomerism of polymers, Chain growth polymerization, Mechanism of free-radical, Cationic and Anionic polymerization, Membrane Osmometry, Viscometry and Light Scattering.
Chemistry Paper-SE CH 605 B	Students will understand the History and Types of Portland Cement, Indian Standard Institute (ISI) Specification of Cement, Manufacturing process of Portland Cement.
Chemistry Paper-SE CH 605 C	To enable the students to learn about the Food Additives, functionalities Assessment, Classification of Food additives, List of Authorized Food Additives, Risk benefit Ratio
Chemistry Paper-SE CH 605 D	To enable the students to learn about the Soap and its manufacture, Recovery of glycerin from spent lye, Principal groups of synthetic detergents, Eco-friendly detergents & Manufacture of shampoos
Chemistry Paper-SE CH 605 E	To enable the students to learn about the Introduction, Definition, and Scope of Forensic Science, Relationship with reference to Crime Investigation, Introduction & Classification of Toxicology, Extraction & Analysis of Poisons.

**Chemistry Practical
Paper-LC CH 607**

To enable the skill development in students about semi microqualitative analysis, estimations, intermediates, their application and uses in the industries than the students can utilized theirway of knowledge in industries to develop the small scale.

Department of Mathematics

Program Outcome	<ul style="list-style-type: none"> ▪ The B.Sc. program in Mathematics aims to equip students with a strong foundation in mathematical concepts, techniques, and problem-solving skills. ▪ Upon completing the program, students should be able to apply mathematical principles to analyze and solve complex problems in various fields such as engineering, computer science, and physics. ▪ The program also focuses on developing students' critical thinking and logical reasoning abilities, enabling them to effectively communicate mathematical ideas and concepts. ▪ Graduates of the B.Sc. Mathematics program will possess a solid understanding of advanced Mathematical topics, including calculus, and algebra, preparing them for further academic pursuits or careers in research, teaching, data analysis, or other math-intensive professions.
Program Specific Outcome	<ul style="list-style-type: none"> ▪ The program leading to this degree provides the opportunities to develop and demonstrate knowledge and understanding in the following areas. ▪ When one has completed this degree she/he will have knowledge and Understanding of the fundamental concept, principles and techniques from a range of topic areas. ▪ When one has completed this degree she/he will be able to understand how to solve some problems using the methods taught and develop abstract mathematical thinking. ▪ When one completes this degree she/he will be able to clearly demonstrate mathematical knowledge, ideas and conclusions in communication and improve their learning and performance.
Course Outcomes	
Mathematics Paper- SC23MJDSCMAT 101	Students will be able to • Execute successive differentiation • Application of Leibnitz theorem in real life problems • Understand geometrical concept of Cauchy Mean Value Theorem • Use of Taylor's & Maclaurin's theorem • Evaluate limit by L'Hospitals rules • Vector algebra, scalar product, vector multiplication, co-planar vectors, reciprocal vectors set, properties and use of gradient, divergent and curl.
Mathematics Paper- SC23PMJDSCMAT101(A)	Students will understand the practical use of • Successive differentiation • Cauchy Mean Value Theorem, Taylor's & Maclaurin's theorem • Evaluate limit by L'Hospitals rules.
Mathematics Paper- SC23PMJDSCMAT101(B)	Students will be able to • Create and format Mathematical documents using Microsoft Word, including equations, symbols and Mathematical notation • Use Excel functions and tools relevant to mathematical data analysis • Create effective PowerPoint presentation using visual aids and graphs to communicate mathematical concepts.
Mathematics Paper- SC23MIDSCMAT 102	Students will be able to • Execute successive differentiation • Application of Leibnitz theorem in real life problems • Understand geometrical concept of Cauchy Mean Value Theorem • Use of Taylor's & Maclaurin's theorem • Evaluate limit by L'Hospitals rules.
Mathematics Paper- SC23PMIDSCMAT102	Students will understand the practical use of • Successive differentiation • Cauchy Mean Value Theorem, Taylor's & Maclaurin's theorem • Evaluate limit by L'Hospitals rules.
Mathematics Paper- SC23MDCMAT1	Students will be able to • Execute successive differentiation • Application of Leibnitz theorem in real life problems • Understand geometrical concept of Cauchy Mean Value Theorem • Use of Taylor's & Maclaurin's theorem • Evaluate limit by L'Hospitals rules.

03	
Mathematics Paper-SC23PMDCMAT 103	Students will understand the practical use of • Successive differentiation • Cauchy Mean Value Theorem, Taylor's & Maclaurin's theorem • Evaluate limit by L'Hospitals rules.
Mathematics Paper-SC23SECMAT10 6	Students will get knowledge mathematical formulas and concept of competitive examination • Aware with the short tricks to solve the problems asked in competitive examination, which are time consuming by its usual methods of solving them.
Mathematics Paper-SC23MJDSCMAT 201	Students will learn • Properties of matrices, row and column dependence, rank and inverse of a matrix • By applying matrix operations solving the systems of linear equations • Analyzing the concepts of integral calculus and its applications in various fields • Skill of solving linear and homogeneous differential equations by using various methods.
Mathematics Paper-SC23PMJDSCMA T201(A)	Students will be able to • Solve problems using properties of matrices, row and column dependence, rank and inverse of a matrix • By applying matrix operations solving the systems of linear equations • Analyzing the concepts of integral calculus and its applications in various fields.
Mathematics Paper-SC23PMJDSCMA T201(B)	Students will understand • Use of Excel functions, formulas, charts and other tools relevant to mathematical data analysis • Create effective PowerPoint presentation using visual aids, diagrams and graphs to communicate mathematical concepts.
Mathematics Paper-SC23MIDSCMAT 202	Students will learn • Properties of matrices, row and column dependence, rank and inverse of a matrix • By applying matrix operations solving the systems of linear equations • Analyzing the concepts of integral calculus and its applications in various fields.
Mathematics Paper-SC23PMIDSCMA T202	Students will be able to • Solve problems using properties of matrices, row and column dependence, rank and inverse of a matrix • By applying matrix operations solving the systems of linear equations • Analyzing the concepts of integral calculus and its applications in various fields.
Mathematics Paper-SC23MDCMAT2 03	Students will learn • Properties of matrices, row and column dependence, rank and inverse of a matrix • By applying matrix operations solving the systems of linear equations • Analyzing the concepts of integral calculus and its applications in various fields.
Mathematics Paper-SC23PMDCMAT 203	Students will be able to • Solve problems using properties of matrices, row and column dependence, rank and inverse of a matrix • By applying matrix operations solving the systems of linear equations • Analyzing the concepts of integral calculus and its applications in various fields.
Mathematics Paper-SC23SECMAT20 6	Students will aware with the short tricks to solve the problems asked in competitive examination which are time consuming by its usual methods of solving them.
Mathematics Paper-CCMAT-301	Enable the students to get understand the limit and continuity of functions of several variables and partial derivatives • Application of partial derivatives in finding extrema of functions of several variables • Curvature, radius of curvature for cartesian, polar and parametric curves, centre and circle of curvature and double point.

Mathematics Paper-PC MAT- 301	Students will understand the practical use of limit, continuity and partial derivatives, application of partial derivatives and radius of curvature; determine the centre and circle of curvature and double point.
Mathematics Paper-ESMAT- 31	Students will learn the applications of graphical method, Bisection method, Method of False position, Newton Raphson's method, Method of iteration and Horner's method.
Mathematics Paper-CC MAT- 302	Students will able to define Basic concepts of operators Δ , E , ∇ • Find the difference of polynomial • Solve problems using Newton forward formula and Newton backward formula. • Derive Gauss's formula and Sterling formula using Newton forward formula and Newton backward formula. • Find maxima and minima for differential difference equation • Derive Simpson's 1/3, 3/8 rules using trapezoidal rule • Find the solution of the first order and second order equations with constant coefficient • Find the summation of series finite difference techniques • Find the solution of ordinary differential equation of first order by Euler, Taylor methods.
Mathematics Paper-PC MAT- 302	To enable the students how to practically use Newton forward formula and Newton backward formula • Gauss's formula and Sterling formula using Newton forward formula and Newton backward formula • Simpson's 1/3, 3/8 rules using trapezoidal rule Euler, Taylor and Runge-Kutta methods.
Mathematics Paper-CC MAT- 401	To enable the students to learn about Riemann integral and its properties • Multiple integration • Vector analysis, line and surface integrals • Green's Theorem, Stoke's Theorem and its application.
Mathematics Paper-PC MAT- 401	To enable the students to learn about the practical use of Riemann integral, double/triple integral, Green's Theorem, Stoke's Theorem, Divergence theorem.
Mathematics Paper-CC MAT- 402	To enable the students to learn about Vector Space, Quotient space Direct sum • Linear span and linear independence, basis and inner product • Linear transformations, rank, nullity • Find the characteristic equation, Eigen values and Eigen vectors of a matrix. • Prove Cayley-Hamilton theorem, Schwarz's inequality, Gram Schmidt orthogonalization process • Solve the system of simultaneous linear equations.
Mathematics Paper-PC MAT- 402	Students will learn the applications of vector spaces, subspaces, basis and dimensions of vector spaces • Verification of dimension theorem, applications of linear transformations • Range and kernel of a linear map, application and verification of Rank Nullity theorem • Gram Schmidt orthogonalization process and Cayley-Hamilton theorem.
Mathematics Paper-ES MAT- 41	Students will learn Beta and Gamma functions • Applications, properties and several forms of Beta and Gamma functions.
Mathematics Paper-CC MAT- 501	Students will able to know about group, subgroup, normal, center, normalizer of a subgroup, • Cyclic group, quotient group, permutations, homomorphism, isomorphism and its applications.
Mathematics Paper-CC MAT- 502	The students will learn about number system, countable and uncountable sets, • Metric space, limit point of a set, open, closed, bounded, compact and connected sets of metric spaces • Sequence and series convergence.
Mathematics Paper-CC MAT- 503-A	The students will learn to find the solution of the homogeneous linear differential equations with variable coefficients • Linear and non-linear exact differential equations • Different forms of linear differential equations of second order with variable coefficients by methods changing dependent variable, changing independent variable, factorization of the operator, method of variation of parameters and undetermined co-efficient.
Mathematics Paper-CC MAT- 504-C	The students will learn about simplex method, Two Phase Method, Big-M Method and Graphical method to solve LPP.

Mathematics Paper-PC MAT- 501TO 504	Students will understand the use of MATLAB. Using MATLAB students can calculate examples of vectors and matrices, polynomials, graphics, ordinary linear differential equation • The students can find the value of definite integral.
Mathematics Paper-ES MAT- 51	Students will learn the relationship between roots and coefficients • To find the roots of equations with real/ rational coefficients • Formation of equations whose roots are given • Method of least square approximation.
Mathematics Paper-CC MAT- 601	Students will able to know about ring, zero divisors, division ring, field, integral domain • Quotient ring, maximal ideals and prime ideals of polynomial and its applications.
Mathematics Paper-CC MAT- 602	The students will learn about limit and continuity of a function from a metric space to another metric space • Differentiability of a real function, Mean value theorems, L'Hospital rule • Riemann integral and its properties, Riemann stieltje's integral and its properties • Sequence of functions, limit and uniform convergence of sequence of functions.
Mathematics Paper-CC MAT- 603-B	Students will able to know about well ordering principle, Mathematical Induction, Binomial theorem • Division algorithm, Euclidean algorithm, linear Diophantine equation • Prime and Composite Numbers, Definition and basic properties of congruence, application of Chinese Remainder theorem, Residue Classes • Fermat's little theorem, Euler's theorem, Phi function and Wilson Theorem and its Applications.
Mathematics Paper-CC MAT- 604	Students will learn different methods such as North West Corner method, Least cost entry method, Vogel Approximation method of finding initial solution of Transportation Problems • MODI method for finding optimal solution of Transportation Problems • Hungarian method of solving assignment problems, • Johnson's algorithm of solving sequencing Problems • Introduction of Two-person zero sum games, Minimax and Maximin principles, saddle point, dominance principles, graphical method of solving $2 \times m$ and $m \times 2$ games.
Mathematics Paper-ES-MAT- 61	Students will know about Mean, Median, Mode, Harmonic mean, Geometric mean, Arithmetic mean • Measure of dispersion such as standard deviation, variance etc., • Correlation, types of correlation, correlation and regression coefficients and its properties and examples.
Mathematics Paper-PC MAT- 601TO 604	Students will understand • Data input, interactive inputs, output commands, formatted input-output functions • MATLAB programming techniques • Discrete Math/Number theoretic functions • Coordinate System Conversion • Interpolation Functions • Numerical Integration and Differentiation Functions • ODE Solvers • Optimization • Statistical Functions • Numerical Methods practicals using MATLAB programming • Linear Algebra • Graph theory • Calculus • Optimization.

Department of Mathematics(M.SC.)

Programme Outcome	Students will learn an understanding of major concepts, principal in all disciplines of Mathematics.
	Students know about four major focusing areas . Logical reasoning and motivation ,analysis and problem solving ,information and technology proficiency.
Programme Specific Outcome	The programme leading to this degree provides the opportunities to develop and demonstrate knowledge and understanding in the following areas. When one has completed this degree she/he will have knowledge and understanding of the fundamental concept ,principles and techniques from a range of topic areas. When one has completed this degree she/he will be able to

	<p>understand how to solve some problems using the methods taught and develop abstract mathematical thinking.</p> <p>When one has completed this degree she/he will be able to demonstrate the communication clearly knowledge , ideas and conclusions about mathematical and improve his/her own learning and performance.</p>
Course Outcomes	
<p>Mathematics MSM1101 Measure Theory</p>	<p>To enable the students to learn about</p> <ul style="list-style-type: none"> *Algebra and algebra of sets, algebra of Borel sets, Lebesgue outer measure on \mathbf{R}, measurable sets, Lebesgue measure. *Measurable function, Littelwood's three principles, Egoroff's theorem, Integral of a simple function, Lebesgue integral of bounded functions, bounded convergence theorem. *Integral of nonnegative functions, general Lebesgue (integral), Fatou's lemma, monoton convergence theorem, Lebesgue's convergence theorem, convergence in measure. *Differentiation of monotone functions, functions of bounded variation, differentiation of an integral, absolutely continuous functions and indefinite integrals.
<p>Mathematics MSM1102 General Topology</p>	<p>Students will able to know about</p> <ul style="list-style-type: none"> * Topological spaces, basis and sub-basis for a topology (definitions and examples only), The order topology, the product space $\prod X_i$ (for finitely many topological spaces X_i), subspace topology , closed sets, limit points. * Continuous functions, Homeomorphisms, the pasting lemma, Map into products, the metric topology, the sequence lemma , Uniform limit theorem, The quotient topology. * Connected spaces, path connected spaces, connected sets in the real line, components and path-components, locally connected spaces and path connected spaces. * Compact spaces, compact sets in the real line, limit-point compactness, locally compact spaces, one-point compactification.
<p>Mathematics MSM1103 Theory of Ordinary Differential Equation</p>	<ul style="list-style-type: none"> *Simultaneous ordinary differential equations of first order and first degree, Cauchy's Problem, Linear equations , Non linear equations *Power series solution of linear differential equations , Ordinary and singular points , Classification into regular and irregular singular points, Series Solution, Frobenius Method, Chebyshev and Gauss Hypergeometric equations and their general solutions * Generating function, Recurrence Relations,, Rodrigue's Formula, Orthogonality properties.
<p>Mathematics MSM1104 Mathematical Modelling</p>	<p>To enable the students to learn about</p> <ul style="list-style-type: none"> *Introduction to the subject, its scope and limitation, classification of models. Dimensional Homogeneity, Technique of dimensional analysis, an arithmetic model of Gravity, Simple population growth model, Logistic population

	<p>growth model, Geometric interpretation of logistic growth function. *Two Species Population Models: Prey–Predator models for population dynamics, Geometric interpretation and stability of Prey-Predator model, competition model, Epidemic Models, Simple deterministic model, SIS Model, Epidemic Models with constant number of carriers, Epidemic model with removal. *Diffusion and Glucose in the Blood stream, Model for diabetes Mellitus, Genetics Models: Hardy-Weinberg law model for genetics, Genetics model for Blood groups. *Traffic Models: Macroscopic Highway traffic model, continuum hypotheses and the fundamental diagram, linear-car-following models.</p>
<p>Mathematics Msm3101 Elementary MATLAB Programming</p>	<p>Introduce to MATLAB, Arrays and Matrices, Functions and File, Practicals related to theory part,</p>
<p>Mathematics Msm3102 Advanced MATLAB Programming</p>	<p>Matlab Programming Techniques, Plotting :XY-Plotting Functions, Subplots and overlay plots, Special plot types, Interactive plotting, Function discovery, 3-D Plots, Polynomials, Integration and Differentiation. *Practicals related to User Defined functions, Mathematical / Engineering case studies.</p>
<p>Mathematics MSM4101 Integral Transform</p>	<p>Students can understand the * Laplace transform- Definition and its properties. Rules of manipulation. Laplace transform of derivatives and integrals. * Properties of inverse Laplace transform. Convolution theorem. Complex inversion formula. *Fourier transform - Definition and properties of Fourier sine, cosine and complex transforms. *Convolution theorem. Inversion theorems. Fourier transform of derivatives. Mellin transform-Definition and elementary properties. Mellin transforms of derivatives and integrals. Inversion theorem. Convolution theorem.</p>
<p>Mathematics MSM1201 Advanced Topology</p>	<p>Students will understand the practical use of complex number and differential equation and its application. Unit 1 Countability Axioms: First countable space, second countable space, separable space, Lindeloff space Unit 2 Separation axioms- Hausdorff space, regular space, normal space, Urysohn’s lemma, Completely regular space, Tietze extension theorem. Unit 3 Imbedding of Manifolds, Partition of unity, Tychonoff theorem (statement only), The Stone-ech Compactifications and uniqueness. Unit 4 Complete metric space, Compactness in metric spaces, Ascoli’s theorem, Bair spaces, Baire category theorem.</p>

Mathematics
MSM1202 Algebra - I

Students will understand the practical use of successive differentiation ,
integration, Describe the various forms of equation of a plane,
straight line,
Sphere, Cone and Cylinder. **Unit 1 [Revision:** Group,
Subgroup, Normal Subgroups, Quotient groups,
Homomorphism of groups,
Isomorphic groups, Permutation groups, Direct product of
groups]
Cayley's theorem, Conjugacy relation on a group and its
applications, Solvable groups.
Page **12** of **35**
Unit 2 Group actions, Sylow's theorem, , Finite abelian groups,
Simple groups.
Unit 3 [Revision: Ring, subrings, ring homomorphisms, ideals
and quotient rings, prime and maximal ideals,
Polynomial rings]
Field of fractions of an integral domain, Divisibility in rings,
Euclidean ring, Principal Ideal rings.
Unit 4 Polynomial ring over a rational field, irreducibility
criteria, polynomial ring over a commutative ring,
Unique factorization domain.

Mathematics
MSM1204
Statistical Methods

The students will understand the use of *Descriptive
Statistics and Correlation
Exploratory Data Analysis: The Stem-and-leaf Display; Cross
Tabulation & Scatter Diagrams
Measures of location: Mean, Median, Mode, Percentiles,
Quartiles; Measures of Variability: Range, Inter-quartile Range,
Variance, Standard Deviation, Coefficient of Variation
Measures of Distribution Shape, Relative Location and
Detecting Outliers, Measures of
Association Between Two Variables; Covariance, Correlation
* Probability & Probability Distribution
Probability: Basic probability concepts (Experiment, sample
space, events, exclusive events, exhaustive events,
independent events, dependent events), methods for
assigning probability (Classical
method, relative frequency method, subjective method),
events and their probability, addition rule , conditional
probability, multiplication rule , Bayes' theorem.
*Probability distribution: Random variable, Discrete and
continuous random variable, expected value and variance of
random variable, Probability distribution, Binomial
distribution, Poisson distribution,
Hypergeometric distribution, Uniform distribution, Normal
distribution, Normal approximation of Binomial, exponential
distribution, relationship between Poisson and Exponential
distribution
* Statistical Inference, Sampling methods, sampling
distribution, central limit theorem , point and interval
estimation, sampling distribution of sample mean, sampling
distribution of sample proportion, *Hypothesis tests: Null &

	<p>alternative hypothesis, Type I & II errors, one and two tailed test, rejection rule using p-value and critical value approach, test of hypothesis about population mean (known, unknown and small sample), test of hypothesis about population proportion, Sampling distribution and test of hypothesis about difference between two population means .</p> <p>*Regression: Introduction to Regression; Simple linear Regression Model; least Square Method; Coefficient of Determination; Correlation Coefficient; Model Assumptions; Residual Analysis: Validating Model Assumptions; Outliers and Influential Observations Using the Estimated Regression Equation for Estimation & Prediction.</p>
<p>Mathematics MSM3201 ODE MATLAB PROGRAMMING</p>	<p>The students will understand the use of different methods like First/Second/ higher order Ordinary differential Equations such as differential equations using: Picard's method, Taylor's Method, Euler's Method, Modified Euler's Method, Improved Euler's Method Runge Kutta 2nd Method, Predictor and Corrector Method.</p>
<p>Mathematics MSM3202 Numerical Methods with MMATLAB</p>	<p>Related to Numerical Solutions of equations such a finding roots of a polynomial using: Bisection Method, Newton- , Regula falsi method, Inverse Matrix, Gauss Elimination Method, Gauss-Seidal method, Simpson's 1/3 and 3/8 method, Trapezoidal Method, Langrange's interpolation etc...</p>
<p>Mathematics MSM 4201 Research Methodology</p>	<p>* Introduction meaning of research, Objectives of research, Motivation in Research, of research .Significance of research, research and scientific Methods, Importance of knowing how research is done, Selecting the problem, necessity of defining the problem, Technique involved in defining the problem.</p> <p>*Meaning of Research Design, Features of good design, Different research design, Basic principles of experimental designs, Scientific writing, Research proposal, Research paper, review paper, Thesis, Conference report, Book review and project report.</p>
<p>Mathematics MSM1301 Functional Analysis-I</p>	<p>To enable the students to learn about</p> <p>*Normed linear space: definition and examples, continuous linear transformations, spaces $BL(X,Y)$, $BL(X)$ and $BL(X,X)$, l^p & L^p ($0 \leq p \leq \kappa$) Banach spaces.</p> <p>* Hahn-Banach theorem and its applications, open mapping theorem, Dual normed spaces, natural imbedding of normed space into double dual space of normed spaces.</p> <p>* Closed graph theorem, uniform boundedness principle, conjugate of an operator, bounded inverse mapping theorem.</p> <p>*Hilbert space: definition and examples, orthogonal complement, orthonormal set, Bessel's inequality, Projection theorem, Riesz Representation theorem.</p>
<p>Mathematics MSM1302 Complex Analysis</p>	<p>To enable the students to learn about</p> <p>*Regions in the complex plane, continuity and differentiability of complex functions, analytic functions, Cauchy-Riemann</p>

	<p>equations, harmonic Functions of two variables, Infinite series of complex numbers, power series functions.</p> <p>*The elementary Functions: exponential, trigonometric, hyperbolic functions, logarithmic functions and its branches, rectifiable arcs. Complex line integral, complex contour integral, Cauchy's theorem for triangular contours, anti-derivatives.</p> <p>*Cauchy's integral formula, derivative of analytic functions, Morera's theorem, Liouville's theorem, Fundamental theorem of algebra, Taylor expansions, Laurent expansions.</p> <p>*Singularities, zeros of analytic functions, poles, residues, Residue Theorem, residue at poles, evaluations of improper integrals.</p>
<p>Mathematics MSM1303 Number Theory</p>	<p>* Divisibility, G.C.D., Primes, the fundamental theorem of arithmetic, the Euclidean algorithm, The greatest integer function, the Mobius function μ, the Euler function the divisor functions σ_k for $k \geq 0$ integer, properties of these functions, multiplicative functions, Mobius inversion formula.</p> <p>* Congruence, complete residue systems, Linear Congruence, reduced residue systems, Euler-Fermat theorem, the Chinese remainder theorem, The exponents of a number mod m, primitive roots.</p> <p>*Quadratic residues, Legendre Symbol and its properties, Gauss' Lemma, the quadratic reciprocity law, the Jacobi Symbol.</p> <p>*Diophantine Equations $ax + by = c$ and its positive solutions, the equation $X^2 + Y^2 = Z^2$, the equation $X^4 + Y^4 = Z^2$ and the equation $X^4 + Y^4 = Z^4$, sum of squares, the Fermat's Last theorem.</p>
<p>Mathematics MSM2303 Mathematics Of Money</p>	<p>*The Simple Interest Theorem, Consequences of the theorem, Financial Digression, Ambiguities when interest period is measured in days, Number of days calculations, The Compound Interest Theorem, Consequences of the theorem, The annual effective rate, time diagram and cash flows, interest rate of return (IRR), Financial Digression, The IRR uniqueness theorem and its consequences, the rule of 72, Inflation, The purchasing power theorem, consumer price index (CPI), personal taxes, the tax theorem.</p> <p>*An ordinary annuity, the future value of an ordinary annuity theorem (OAT), consequences of OAT, the interest value of an OAT and its applications, An annuity due, the future value of an annuity due theorem (ADT), the present value of an ADT, perpetuities, loans and risks, examples of loans (bond, zero coupon bond, credit card load)</p> <p>* Amortization tables, the amortization theorem, periodic payments, the periodic payment theorem (PPT), consequences of PPT, linear interpolations, credit cards payments, the credit card theorem and its applications, credit card numbers.</p> <p>* Bonds, noncallable bonds, the bond theorem, the price-yield theorem, accrued interest, duration, modified duration,</p>

	convexity, portfolio, buying and selling stocks, the dollar cost averaging theorem, the long sale maintenance level theorem, the short sale maintenance level theorem and its examples.
Mathematics MSM3301 PDE MATLAB PROGRAMMING	MATLAB Programs for solution of partial differential equations using: Laplace equation, Poisson equation, Schmidt Method, Crank Nicolson Method, ADI Method, Explicit Method for wave equation, Lees ADI method for wave equation.....
Mathematics MSM3302 LATEX PROGRAMMING	Basic introduction to Latex, Structure of Latex, First document produced using Latex, Use of different fonts, size apply page break and line break, use command for making text bold, italic, emphasis, underline, Document structure, equation environment, single equation, multi line single equation, multi equations, mathematical symbols. How to write array and matrix in LATEX, Writing theorem and lemma using LATEX. Preparing Tables using LATEX, Use of Graphics package in LATEX. How to write bibliography using LATEX.
Mathematics MSM4301 Advanced Linear Algebra.	*The algebra of linear transformation, characteristic roots, matrices. *Triangular canonical forms, nilpotent linear transformations. *Trace and transpose, a decomposition theorem, Jordan canonical forms. *Rational canonical forms, Determinants.
Mathematics MSM1401 Functional Analysis-II	*Dual and transpose of a Hilbert spaces, adjoint of an operator, self-adjoint, normal, unitary operators, projections. * Finite dimensional spectral theorem, Weak and weak* convergence.. *Banach algebra: definition and examples, regular and singular elements, topological divisors of zero, spectral of an element and spectral radius, radical and simplicity.. *Gelfand mapping, applications of the formula of the spectral radius, involutions in Banach algebra, Ideals in $C(X)$, Banach-Stone theorem, Commutative C^* -algebras, Stone-Weierstrass theorem, Gelfand-Naimark theorem for commutative C^* -algebras.
Mathematics MSM1402 Field Theory	* Extensions of field, Finite, algebraic and simple field extensions, algebraic and transcendental numbers. *Roots of polynomials, the splitting field of a polynomial over a field, construction with straightedge and compass. *The fixed field of a group of automorphisms, the theorem on symmetric polynomials, normal field extension, the Galois group of a polynomial. *The fundamental theorem of Galois theory, solvability by radicals, Galois group over the rationals, finite fields.
Mathematics MSM1403 Graph Theory	Definition, Degree of vertex, path, circuit, connected and disconnected graphs, components. *Euler trail, Euler path, Euler Graph Characterization of Eulerian graph, Hamiltonian Paths and Cycles. *Trees and their Properties, Bridges, Spanning Trees, Kruskal's algorithm, Prim's algorithm. *Planar Graphs, Kuratowski's two graphs, Different representation of planarity, Detection of Planarity.

<p>Mathematics MSM2402 Operation Research</p>	<p>*Sequeuing and Networks *Project Network *Inventory Models *Queuing Models. *Simulation Models *Decision Models, *Replacements Models</p>
<p>Mathematics MSM3401 ComputerGraphicsProgramming</p>	<p>The students are expected to write and run the computer programs on the following topics. *Implication of line and circlr algorithm. *Modification in line algorithm to generate dashech line. *Character display *Plygon filling. *Transformation of objects. *Use of segments in forming pictures from given objects. *Zooming the portion of windows and display in view ports. *Line clipping and polygon clipping. *Displaying 3-D objects on 2-D surfaces.</p>
<p>Mathematics MSM3402 C-Language Programming</p>	<p>*Statistical data processing programs. *Functions Programs. *Operations on Matrices, Gauss elimination method and its applications. *Sequences sortings, searching and merging, program related to function. *Function to read a line and store in buffer, find length and so on *Program related to structures, Pointers and functions. *Newton's form on polynomial, interpolation polynomial, divided difference table. *Numerical integration, numerical solutions of differential equations.</p>
<p>Mathematics MSM4405 Applications of Mathematics in Environmental Studies</p>	<p>*Linear equations, Matrix form, row reduction, row reduction, row rank, column rank, row equivalence, ,row reduced echelon matrices, various methods to find solutions of a system of linear equations. *Introduction to ecology,and environment, linear programming, problem related to ecology and environment.</p>

ACCREDITED WITH GRAD

A+

OUTCOME of PROGRAMME PHYSICS

CGPA 3.45

NAAC
NATIONAL ASSESSMENT AND
ACCREDITATION COUNCIL

PHYSICS DEPARTMENT

Programme Outcome	Student learns concepts of physics theoretically some of the concepts are tested through experiments some pure theoretical fundamentals are purely understood through the mathematical framework.
Programme Specific Outcome	Some pure theoretical concepts are studied by the students are indirectly applicable to the recent technology so, indirectly students can keep the pace with current trends in science and technology.
Courses Outcomes	
SC23 MIDSC PHY 102 (Minor)	<p>After successful completion of the course students will be able to..</p> <ul style="list-style-type: none"> • Understands the concepts and significance of scalar and vector fields as well as operations of operator ∇, Gauss theorem and Stoke's theorem. • Understands the Thermodynamics, Carnot's theorem and concept's of entropy. • Calculate change in various thermodynamic processes.
SC23 MDSC PHY 103 (Multi)	<p>After successful completion of the course students will be able to...</p> <ul style="list-style-type: none"> • Learn about Ultrasonics, Production and its application. • Will get sufficient knowledge of sound and theory of resonator. • Learns sufficient knowledge of various rectifier, Filter circuits and applications of them.
SC23 MIDSC P PHY 102 (Minor Practical)	<p>By end of the course, the students will be able to understand..</p> <ul style="list-style-type: none"> • The basic principles of physics related to their courses in the practically way. • The operational details of spectrometer, electronics circuits etc. • The experimental design aspects to determine various properties of like gravity, quality factor, refractive index, determination of Cauchy's constants, analysis of spectra, analysis of error, determine value of unknown frequency etc. • The process to analyze the observations and infer the outcome of the experiments. • How to analyse the experimental data and graphical analysis.
SC23 MDSC P PHY 103 (Multi Practical)	<p>By end of the course, the students will be able to understand..</p> <ul style="list-style-type: none"> • The basic principles of physics related to their courses in the practically way. • The operational details of electronics circuits and take care about safety with current, etc. • The experimental design aspects to determine various properties of P-N junction diode, different type of gate, Power transfer theorem, construction of capacitor, and zener diode etc. • The process to analyze the observations and infer the outcome of the experiments. • How to analyse the experimental data and graphical analysis.
SC23 SEC PHY 106 (Skill Enhancement Course)	<p>At the end of the course students will be able to .</p> <ul style="list-style-type: none"> • Understand the basic knowledge of working of various instruments and its application. • Learn's the construction, working process and use of various measuring instruments. • Will get sufficient knowledge of Galvanometer and determine various scientific parameters.

SC23 MIDSC PHY 202 (Minor)	<p>After successful completion of the course students will be able to</p> <ul style="list-style-type: none"> • Understands the concepts of electrostatics, learns how to determine the charge of an electron. • Learns the concepts of Simple Harmonic Oscillation and combination of SHM. • Understands the concepts of Damped and Forced Oscillations and its applications.
SC23 MDSC PHY 203 (Multi)	<p>After successful completion of the course students will be able to...</p> <ul style="list-style-type: none"> • Learn basic concepts of DC Circuits, its functioning and principles of Network analysis. Also apply theorems to construct and solve electrical circuits. • Learns the knowledge of various types of Aberration and Interference. • Get sufficient knowledge of Newton's ring experiments and determine wavelength.
SC23 P MIDSC PHY 202 (Minor Practical)	<p>By end of the course, the students will be able to understand..</p> <ul style="list-style-type: none"> • The basic principles of physics related to their courses in the practical way. • The operational details of spectrometer, electronics circuits etc. • The experimental design aspects to determine various properties of like gravity, quality factor, refractive index, determination of Cauchy's constants, analysis of spectra, analysis of error, determine value of unknown frequency etc. • The process to analyze the observations and infer the outcome of the experiments. • How to analyze the experimental data and graphical analysis.
SC23 P MDSC PHY 203 (Multi Practical)	<p>By end of the course, the students will be able to understand..</p> <ul style="list-style-type: none"> • The basic principles of physics related to their courses in the practical way. • The operational details of electronics circuits and take care about safety with current, etc. • The experimental design aspects to determine various properties of PN junction I-V characteristics and load line analysis. Numerical analysis like Gauss Backward interpolation formula, The process to analyze the observations and infer the outcome of the experiments. • How to analyze the experimental data and graphical analysis.
SC23 SEC PHY 206 (Skill Enhancement Course)	<p>At the end of the course students will be able to .</p> <ul style="list-style-type: none"> • Understand the basic knowledge of working of various basic passive component of electrical circuit like Resistor, capacitor and inductor. Its construction, different types of resistor, Measurement of resistor and trouble found in it. • Learn's the construction, working process and use of various measuring instruments. • Will get sufficient knowledge of Cells and battery, Transformer and its construction, types and function in different electrical circuits.
CC-PHY-301	<p>Obtaining knowledge of thermodynamics, Sound, Atomic spectra, Solid state physics (Crystal structure, Atomic cohesion and Crystal binding)</p>
PC-PHY-301	<p>Experimental knowledge of relevant concepts to the theory.</p>
CC-PHY-302	<p>Obtaining knowledge of electrostatic in dielectrics, Magnetostatic, Practical application of electromagnetic induction, Optics (diffraction, Resolving power of different instruments and</p>

	polarisation,) Electronics (Basic transistor, Transistor Biasing and stabilisation, Basic Transistor Amplifier).
PC-PHY-302	Experimental knowledge of relevant concepts to the theory.
CC-PHY-401	Gaining knowledge of Classical Mechanics (Mechanics of single particle and of system of particles, Special theory of Relativity), Nuclear physics (Detectors and Accelerators, Radioactivity, The Q-Equation) and Plasma Physics (The basic concept of plasma, Motion of charge and velocity in magnetic and electric field.
PC-PHY-401	Experimental testing of relevant concept.
CC-PHY-402	Obtaining clarity of Statistical Mechanics (Microscopic and macroscopic state, Statistical ensemble), Mathematical physics and quantum mechanics (Fourier series, Schrodinger equation and stationary states), Electronics (Digital electronics)
PC-PHY-402	Experimental testing of relevant concept.

ACCREDITED WITH GRAD

OUTCOME of PROGRAMME ZOOLOGY

CGPA 3.45

NAAC

NATIONAL ASSESSMENT AND
ACCREDITATION COUNCIL

Department of Zoology

Programme Outcome BSc	<ol style="list-style-type: none"> 1. To understand the complex phylogeny, physiology, immunology, endocrinology, development biology and evolution of different animals. 2. For instance, if you major in Zoology, you can also still take courses from across the other complementary. 3. Apply the wide range of subject based skills of various fields that provide a base for future career in disciplines such as Health Sciences, Aquaculture, Agriculture, Environmental Management, Biotechnology, Publishing, Teaching and Research. 4. Understand the applications of biological techniques to various fields of biology. 5. When you graduate with a Bachelor of Science (Zoology) you can serve as academician in different institutes. 6. The syllabus has been designed in such a way that it will give good experience to the student to work under pressure.
Programme Specific Outcome BSc	<ol style="list-style-type: none"> 1. The primary objective of the program is to impart quality education in the subject of Zoology as a basic science and its applied branches to the students. 2. To provide quality education in a branch of Biological sciences i.e., Zoology with different specializations. 3. To facilitate Higher education & research in zoology. 4. To provide quality education offering skill-based programs and motivate the students for self-employment in applied branches of Zoology. 5. To inculcate the spirit of resource conservation and love for nature. 6. To conduct field studies and different projects of local and global interests. 7. To provides opportunities for professional and personal development through curricular and co- curricular activities. 8. Provide consultancy and organize extension activities.
B.Sc. Zoology Course Outcomes	
SC23MIDSC ZOO102 Basics of Zoology-I	<p>After thorough understanding of the content student will be able to explain:</p> <ol style="list-style-type: none"> 1. Basic knowledge about general topics of classification of kingdom Animalia. 2. The economic and ecological importance of some Non-chordates
SC23MDC ZOO103 Introduction to Zoology-I	<ol style="list-style-type: none"> 1. The student shall have basic knowledge about general topics of cytology. 2. The student shall have basic knowledge about general topics of wildlife biology.
SC23MIDSC ZOO202 Basics of Zoology- II	<p>After thorough understanding of the content student will be able to explain:</p> <ol style="list-style-type: none"> 1. Characteristics and classification of phylum Mollusca and Annelida up to class level. 2. Economic importance of Annelida and Mollusca 3. Characteristics and classification of phylum Arthropoda and Echinodermata up to class level. 4. Economic and ecological importance of arthropods and echinoderms.
SC23MDC ZOO203 Introduction to Zoology-II	<ol style="list-style-type: none"> 1. The student shall have basic knowledge about general topics of genetics. 2. The student shall have basic knowledge about general topics of ecology.

ACCREDITED WITH GRADE
A T

CGPA 3.45

NAAC

NATIONAL ASSESSMENT AND
ACCREDITATION COUNCIL

Department of Commerce	
COMMERCE	To impart the various skills like accounting skills, managerial skills, analytical skill, communication skills and overall exposure of the students. It also enables the students to face the challenges in present competitive world and acquaint the students to understand the changes in worldwide scenario. Besides teach theoretical concepts, students are taught its application also. Other than developing employability of the students it also encourages to cultivate skill of an entrepreneurship. Apart from this it also enhances the knowledge of various sectors of commerce like banking, insurance, marketing, statistics, taxation, business communication, e-commerce etc.
OUTCOMES:	<p>To improve decision making power at personal and professional level</p> <p>To build a strong foundation of knowledge in different areas of Commerce</p> <p>To cultivate the skill of entrepreneurship of students</p> <p>To prepare the students to be competent at every level competitive world.</p> <p>To enhance the skill of applying concepts and techniques used in Commerce</p> <p>To enhance an attitude for working effectively and efficiently in a business firm.</p> <p>To impart basic and operational knowledge on all functional areas of commerce and management</p>
Course Outcomes	
Economics- MAJOR	This course is meant acquaint the students with principals of Business as are applicable in business. It incorporates basic problems of an economy. Students will able to know and learn elasticity of demand, production function and theory costs.
Human Resource Management- ID/MD	To provide conceptual and procedural knowledge of functional area of Human resource management. Students will learn meaning of HRM, human resources planning in a corporate sector, performance appraisal and job design.
Accountancy-I - SEC	To provide sound understanding of the intricacies of solving practical problem relating advanced Accountancy. Students will learn consignment, branch accounts, fire insurance claims and account from incomplete records.
Communication in Business- AEC	To provide conceptual understanding and comprehension of the communication, its objectives, types, and its relevance in English.
Financial Accounting- MAJOR	To expose students to corporate accounting issues and practices such as company Final accounts, share capital transaction etc. students will learn piecemeal distribution of cash, issues and forfeiture of shares, concepts of potential equity shares, sweat equity shares, book building process, bid and buyback, redemption of redeemable shares, company final accounts.
Basic Statistics-MINOR	To make the students acquainted with initial requirement of applied statistical tools. Students will have learnt linear correlation, business forecasting, demographic statistics and matrix algebra.
Secretarial Practice-I- MINOR	To make the student familiar with the basic provisions of the Companies Act.
Fundamentals Entrepreneurship-I- VAC	It provides exposure to the students to the entrepreneurial culture and industrial growth so as to preparing them to set up and manage their own small units.
Business Economics- ID/MD	This course is meant acquaint the students with principals of Business as are applicable in business. Students will learn perfect competition, monopoly, monopolistic competition, factor pricing.
Fundamentals of Marketing Management	To provide basic knowledge of function area of marketing management and marketing research. Students will learn marketing, market demand,

- MAJOR	main functions of marketing, consumer behavior, market segmentation, marketing research, ethical issue in marketing research.
Accountancy-II - SEC	To provide sound understanding of the intricacies of solving practical problem relating advanced Accountancy. Students will learn investment accounts, joint venture, computerized accounting, hire purchase account.
Business Correspondence - AEC	To provide basic understanding business correspondence and its relevance.
Financial Accounting-II - MAJOR	To expose students to corporate accounting issues and practices such as company Final accounts, share capital transaction etc. students will learn purchase of business by a company, Indian accounting standards, underwriting of shares and debentures, redemption of debentures, capital reduction.
Operation Research- MINOR	To make the students familiar with basic knowledge of operation research. Students will learn linear programming problems, transportation problems, assignment and replacement problems, PERT and CPM techniques.
SecretarialPractice-II- MINOR	To make the student familiar with the basic provisions of the Companies Act.
Fundamentals Entrepreneurship-II- VAC	It provides exposure to the students to the entrepreneurial culture and industrial growth so as to preparing them to set up and manage their own small units.
Business Environment & Economics Policies-I - CC201	To provide understanding of business environment and policies like five-year plan, money, financial system and Indian economy.
Indian Financial System -CC202	To make students familiar with Indian Financial System. Students will learn overview of Indian financial system, money market, capital market, commercial banking, NBFC, insurance, mutual funds, capital market instrument, money market instruments.
Taxation-I -CC-203	To make students familiar with Tax pattern of India. Students will learn objectives of taxation, history of taxation, definitions as per the income tax, income tax authorities, residential status of an individuals, procedure for assessment of income tax, salary income, income from house property.
Commercial Communication -CC-204	To provide basic understanding of commercial communication. The basic objective of the course is to acquaint the student with basics of business communication.
Cost Accounting-ICE- 201A	To make students acquainted with Cost Accountancy and equip them prepare cost statement. Students will learn introduction of cost accounting, materials, labour, overheads including activity based costing and conceptual understanding of activity based costing.
CorporateAccounting- CE-202A	To make the students acquainted with Corporate Accounting. Students will learn goodwill, valuation of shares, bank accounts and liquidation of company.
Basic Statistics-III SE- 201B	Students should be aware with basics of preliminary Mathematical Statistics. Students will learn mathematical expectation, discrete probability distribution 1 & 2 and continuous probability distribution.
SecretarialPractice-III- SE-201D	To make the student familiar with the basic provisions of the Companies Act.
Environment Studies:	To create awareness of environment among students through various environmental issues like global warming, earth quake etc.
Economics of Growth and Development-CC- 205	To provide the knowledge of growth and developments of economy. It includes understanding of GST, Tax system, Budget of the year.
ProductionManagement -CC-206	To provide basic knowledge of Functional area of production, purchasing and inventory management. Students will learn production, production management, planning and control, purchasing, inventory control and developing & launching new products services.

Taxation-II -CC-207	To make students familiar with Tax pattern of India. Students will learn profits & gain business or profession, capital gains, income from other sources, deduction under 80C and GST.
Organizational Communication-CC-208	To enable the students to present their interest in preparing questionnaires and understand the basic ideas of preparing advertisements, business reports and important fact of preparing memorandum in business.
Cost Accounting-CE-203A	To supplement and consolidate the cost accounting and costing method and equip the student to make use of various costing methods. Students will learn single or unit costing, reconciliation of profit as per cost account with profit as per financial accounts, operating costing or service costing, job, batch and contract costing.
Auditing-CE-204A	To know the meaning of auditing, various types of auditing and process of auditing in various institution. Students will learn objectives of auditing, company auditor, internal control, vouching and verification and valuation of assets and liabilities.
Basic Statistics -SE-202B	Students should able to apply basic mathematics and statistics in different sector of economics and finance. Students will learn regression, sampling methods, statistical quality control and control charts for attributes.
Secretarial Practice -IV-SE-202A	To make the student familiar with the basic provision of the company act.
Disaster Management:	To create awareness of disaster management and provide basic understanding of types of disasters, pre and post steps for preventing disaster through effective management.
Economics of International Trade - CC-301:	Main object of subject economics is it taught students how to encourage themselves in the market.
Marketing Management Practices CC-302:	To know the practices of marketing management like marketing environment, strategic marketing, marketing mix strategies. Students will learn marketing environment, strategic marketing, production innovations, product lines, marketing channel and communication, marketing communication, international marketing and international marketing.
Corporate Communication-CC-303:	To enable students to know about press report and drafting of the press reports on various incidents. To acquaint the students, the draft various resolutions on various topics. To familiarize the students with various stock exchange terms and its usages.
Basic Statistics - I- CC-304	To study differentiation & its uses by which they know rate of change, elasticity of demand which products are highly affected by price etc. Index numbers is used to predict future trend. Students will learn differentiation, index numbers, interpolation and extrapolation and business applications of derivatives.
Business Law - I - CC - 305:	To understand several of business like Indian Contract Act, 1872, Sales of Goods Act-1930 and consumer protection act1986.
Cost & Financial Accounting: CE-301A	To supplement and consolidate the cost accounting and costing method and equip the student to make use of various costing methods and to expose students to corporate accounting issues and practices such as company Final accounts, share capital transaction etc. Students will learn process costing, marginal costing, amalgamation of companies in the nature of merger, amalgamation of companies in the nature of purchase.

Management Accounting - I: CE-302A	The present lesson explains the meaning, nature, scope and limitations of accounting. Further, it discusses the activities covered under management accounting and its difference with financial accounting. Students will learn functions of management accountancy, analysis of financial statement, financial ratios, cash flow statement and budgets & budgetary control.
General Knowledge: FC - 301-A:	To improve general knowledge of students to make them ready for competitive examination
Indian Business and Economic Environment:CC-306	The subject is helpful for students & their parents for understand the position of economy in current series and budget of the economy.
Fundamentals of Financial Management CC-307:	To aware about Fundamentals of Financial Management like Finance Management, Capital Budgeting, Working Capital, Dividend etc. The students ask to understand financialmanagement. Students will learn scope of financial management, capital structure, working capital, cost of capital, capital budgeting, dividend policy, stock exchange and listing of securities.
Media and Public Related Communication-CC-308:	To make the students aware about stock exchange and its various elements. To make them aware of the various types of stock exchange reports, various trends and causes responsible for the trends. To familiarize the students with tender notice and auction. To enable the students to draft tender notices and auction notices. Acquaint them with relevance of businessEnglish.
Basic Statistics - II - CC-309:	To learn decision theory on that they know which decision is best in Practical problems of farmers which crop should they take businessmen how much they produced quantities according to demand. With time series they will learn to predict trend e.g. in stock market future trend will be bearing or bullish they can decide. Simple moving average is very useful in technicalanalysis. Students will learn co-ordinate geometry, analysis of time series, partial differentiation and element of decision theory.
Business Law - I - CC - 310:	To study about various act like Negotiable Instrument Act-1881, The Companies Act-1956, Factories Act-1948 and Industrial Disputes Act-1947. It will help students to understand the applicability of the variousacts.
Management Accounting - II: CE-303A	The objective of the course is to equip the students with the ability to analysis interpret and use accounting information in managerial decision making. The student is expected to have a good working knowledge of the subject. This course provides the students an understanding of the application of accounting techniques formangement. Students will learn standard costing, time value of money, capital budgeting and inflation accounting.
Auditing -II: CE-304A:	To provide knowledge of company audit, auditor's report and certificate, divisible profit and provisions of depreciation and investigation regardingauditing. Students will learn company audit, auditor's report and certificate, divisible profit and depreciation, investigation and audit program.
General Knowledge: FC - 302-A:	To improve general knowledge of students to make them ready for competitive examination.

M.COM. Commerce

CC101 MANAGERIAL ECONOMICS	To develop the managerial perspective to economic fundamentals as aids to discuss making under given environmental constraints.
CC102 MARKETING MANAGEMENT	To facilitate understanding of the conceptual framework of marketing and its applications in decision making under various environmental constraints.
CC103 BUSINESS RESEARCH METHODS	To present clear, simple, systematic and comprehensive exposition of the methods, principles and techniques of statistics in various discipline with special reference to commerce, management, economics and business.
CC104 FINANCIAL MANAGEMENT	To understand the conceptual framework of Financial Management and its application under various environment constraints.
SS105A ACCOUNTING FOR MANAGERS	To understand the accounting, financial statement analysis, emerging issues in accounting & cost accounting.
CC201 FINANCIAL MARKET	To develop and understanding of financial market in India.
CC202 BUSINESS ENVIRONMENT	To understand the types of environment, economic environment, Indian company law and international business environment.
CE203A FINANCIAL ACCOUNTING & AUDITING	To understand the Indian accounting standard, preparation and audit of financial statement, accounts of package and containers and accounting for special transactions.
CE204A COST ACCOUNTING	To provide sound understanding of the intricacies of solving practical problems relating to Cost Accounting.
SS205C ELEMENTS OF BANKING & INSURANCE	To understand the types and functions of commercial bank, co-operative banking in India, different types of accounts, introduction to insurance and life insurance, marine insurance and fire insurance.
CC301 TAXATION-I (PERSONAL TAX PLANNING)	To equip student with application of principles and provisions of concern Tax Laws regarding personal taxation.
CC302 STRATEGIC MANAGEMENT	The objective of this course is to enhance decision making ability of student in situation of uncertainty in dynamic business environment.
CE303A COST A/C II	To understand the short term decision making techniques, limiting factors and optimal solution, differential, opportunity and relevant costing, JIT.
CE304A FINANCIAL A/C & AUDITING -II	To understand the financial accounting, holding company account, special auditing and cost account.
SS305B SECURITY ANALYSIS & PORTFOLIO MGT	The objective of this course is to help students to understand issues in security analysis & Portfolio Management.
CC401 TAXATION : TAXATION-II (CORPORATE TAX PLANNING & GST)	To understand the definitions, history of taxation, GST, GST –stat and centre financial relation, concept of supply of goods & services.
CC402 IA: INTERNATIONAL	To develop understanding of International accounting, IFRS, Price

ACCOUNTING	Level Changes.
CE403A MGT AC: MANAGEMENT AC-I	To understand the management accounting, budgeting & budgetary control, standard costing & variance analysis.
CE404A MGT AC: MANAGEMENT AC-II	To understand the capital budget, responsibility accounting & transfer pricing.
SS405A HRM: HUMAN RESOURCE MANAGEMENT	The objective of this course is to help students understand the conceptual framework of human resource management.
